

19 March 2019

Community rolling action plan (CoRAP) update covering the years 2019, 2020 and 2021

The Community rolling action plan (CoRAP) update for years 2019 – 2021 lists 100 substances for evaluation by the Member State competent authorities under the substance evaluation process of the REACH Regulation (EC) No 1907/2006 (Articles 44 to 48). The plan contains 24 newly allocated substances and 76 substances as already published in the previous CoRAP on 20 March 2018. The substances are distributed for evaluation in years 2019, 2020 and 2021 between 19 Member States. In 2019, 31 substances are to be evaluated by 11 Member States. In 2020 and 2021, it is planned to evaluate at least 44 and 25 substances, respectively. However, in March 2020 this plan is going to be updated again and changes may be introduced for the substances listed for years 2020 and 2021 (Article 44(2) of the REACH Regulation). Also substances may be added or withdrawn for those years.

The CoRAP update has been prepared in close cooperation with the Member States, taking into account the criteria for selection of substances¹. A draft CoRAP was submitted on 27 September 2018 to the Member States and to the Member State Committee (MSC) for its opinion. The draft CoRAP was published on the ECHA website on 10 October 2018 and amended on 22 October due to last minute additions. ECHA adopted the updated CoRAP on the basis of the opinion of the MSC that was taken in its meeting on 5-7 February 2019 and published it on 19 March 2019.

Comparing to the previous CoRAP update for years 2018 – 2020, 43 changes were made in the year of evaluation in the CoRAP update 2019-2021. For two substances (Triclocarban, EC 202-924-1 and Bis(4-chlorophenyl) sulphone, EC 201-247-9) the evaluation was brought forward in time whilst for the remaining cases the evaluation year was postponed. The reasons for postponement were to wait for the results from ongoing dossier evaluation processes on the same substance or for results from substance evaluation processes of similar substances, as well as limited resources of the evaluating Member State.

Eleven of the existing entries have been withdrawn upon requests of the evaluating Member State upon revision of the cases. As reason it is given that the initial ground of concern has been verified and considered of low priority, an regulatory risk management process is addressing the concern, dossier evaluation clarified the concern or the registrants ceased manufacture of the substance rendering an evaluation obsolete.

The withdrawn substances are:

- 4,4'-Methylenediphenyl diisocyanate, oligomeric reaction products with butane- 1,3-diol, 2,4'- diisocyanatodiphenylmethane, 2,2'-oxydiethanol and propane-1,2-diol (EC 500-415-1 old/ 701-276-1 new);
- 1-isocyanato-2(or 4)-(4-isocyanatobenzyl)benzene and their reaction products with (methylethylene)bis(oxy)]dipropanol and butane-1,3-diol and propylene glycol (EC 701-029-8);

¹ Selection criteria to prioritise substances for Substance Evaluation (2011 CoRAP selection criteria)

http://echa.europa.eu/doc/reach/evaluation/background_doc_criteria_ed_32_2011.pdf

¹ Due to structural similarity, these substances may be evaluated jointly during the process.

² Further concerns may be identified during the substance evaluation process.

³ The substance identifiers have changed. For technical reasons, the old identifiers will be visible for some time.

- (1-methylethyl)-1,1'-biphenyl (EC 247 -156-8),
- diiron tris(sulphate) (EC 233-027-9);
- 10-undecenyl 2-cyano-3,3-diphenylpropenoate (EC 700-604-0);
- Trimethyloctadecylammonium chloride (EC 203-929-1);
- Two members of the Oximino Silanes Category (EC 218-747-8, EC 245-366 4);
- Disodium 4,4'-bis[(4,6-dianilino-1,3,5-triazin-2-yl)amino]stilbene-2,2'-disulphonate (EC 205-117-2);
- Piperonylbutoxide (EC 200-076-7) and
- Dinitrogen tetraoxide (234-126-4).

Background

Initial grounds for concern

The CoRAP contains substances for which there is a suspicion that their manufacture and/or use could pose risks to human health or the environment. Substance evaluation under REACH aims at clarifying such suspected risks.

In the CoRAP update the grounds for the initial concern that triggered the selection of substances for evaluation are briefly described. The concerns per substance are explained in more detail in the related justification documents available in the dynamic CoRAP table published on ECHA website. In many cases the initial concerns are related to PBT²-properties, suspected endocrine disruption, or carcinogenic, mutagenic and/or reprotoxic properties in combination with wide dispersive use or consumer uses. In general, the uses of these substances cover various areas and are not focussed on any particular industrial, professional or consumer uses. The indication of the initial grounds for concern does not limit the evaluation made by the Member States, since the Member State competent authorities may extend their assessment to additional concerns they encounter during the evaluation.

Interaction with Registrants

In the CoRAP update the contact information of the Member State competent authority is provided for each substance to facilitate interaction of registrants with evaluating authorities. ECHA encourages such interaction in order to clarify any concerns related to the substances in question³. While this applies to all substances on the CoRAP, it is particularly relevant for substances to be evaluated in 2019.

² PBT: Persistent, Bioaccumulative and Toxic

³ http://echa.europa.eu/documents/10162/13628/interaction_ms_reg_sev_en.pdf

¹ Due to structural similarity, these substances may be evaluated jointly during the process.

² Further concerns may be identified during the substance evaluation process.

³ The substance identifiers have changed. For technical reasons, the old identifiers will be visible for some time.

Evaluation process

The designated Member States have 12 months to evaluate substances specified for 2019 starting from the date of publication (19 March 2019) of this CoRAP update.

Where necessary, Member States will prepare a draft decision for requesting relevant further information to clarify the suspected risks. The decision will be taken following the decision making procedure described in Article 50 to 52 of the REACH Regulation. Any draft decision for the substances listed in 2019 needs to be submitted to ECHA by 19 March 2020. ECHA will forward such draft decisions to the registrants concerned for comments. Draft decisions, comments received and the consideration of the evaluating competent authority will be reviewed by the peer Member State competent authorities and the ECHA secretariat. If as result of this revision proposals for amendment are made, registrants may comment on such proposals and the MSC agrees on the actual amendment. In cases of unanimous agreement by the MSC, ECHA will take the decision; otherwise the case is referred to the European Commission.

If the available information is sufficient to clarify the suspected risks, the evaluating Member State will prepare a conclusion document that will be published on the ECHA website.

Regulatory consequences

In case the new information confirms the concern, the Member State analyses the options to manage the risk and proposes harmonisation of the classification, identification as substance of very high concern or restrictions of the use of the substance.

¹ Due to structural similarity, these substances may be evaluated jointly during the process.

² Further concerns may be identified during the substance evaluation process.

³ The substance identifiers have changed. For technical reasons, the old identifiers will be visible for some time.

The substances

This list contains 100 substances that are scheduled to be evaluated in years 2019-2021. Furthermore, it contains for each substance the name of the evaluating Member State with contact details and the indication of the initial ground for concern.

The following should be noted:

- The substance public name is used. In most of the cases it is the name disseminated on the ECHA website.
- When the EC Number is not available, the number assigned to substances by ECHA after the inquiry process is used.
- When the substances are included in the CoRAP, they have not yet been evaluated and thus the initial ground for concern is indicative and not exhaustive or conclusive.

Legend:

- Suspected PBT/vPvB: potentially persistent, bioaccumulative and toxic or very persistent and very bioaccumulative.
- CMR: carcinogenic and/or mutagenic and/or reprotoxic based on harmonised or self-classification in accordance with the CLP Regulation. The substance related justification document describes whether the concern is on C, M, R or a combination of those.
- Suspected CMR: potentially carcinogenic and/or mutagenic and/or reprotoxic properties, but currently no harmonised or self-classification in accordance with the CLP Regulation. The substance related justification document describes whether the concern is on suspected C, M, R or a combination of those.
- Sensitiser: sensitising properties based on harmonised or self-classification in accordance with the CLP Regulation.
- Suspected sensitiser: potentially sensitising properties, but currently no harmonised or self-classification in accordance with the CLP Regulation.
- RCR: Risk Characterisation Ratio

¹ Due to structural similarity, these substances may be evaluated jointly during the process.

² Further concerns may be identified during the substance evaluation process.

³ The substance identifiers have changed. For technical reasons, the old identifiers will be visible for some time.
